

1. Discuss 4.2 comments
 - a. The comments about transferring methods from userController to routes: we thought that separating methods into controllers instead of piling them into the routes.js would be cleaner.
 - b. The comments about reloading all of requests: ideally, our app would use socket.io to handle incoming/outgoing requests, but the main concern was requests could be made to a user but not seen even if the user performs an action on the page, so we reload all requests to mitigate this problem.
2. New design decisions
 - a. User with group requesting user with group protocol changed
 - b. User with group requesting individual
 - c. Once become roommates, all requests cleared
3. Where to go from here
 - a. Make suggestions UI prettier: group roommates together
