11/20 Meeting Notes

Updates:
create group instead of list of roommates
add field to user called requestTo
expand from 2 roommates

Issue:
session - stored in server
cookie - stored in client
problems with either session or cookie resetting when you restart server
edge case issue - don't need to worry too much

UI:
better UI expected for final project
google fonts - get better font
checkboxes to buttons - more clickable

Suggestions:
group/organize the preferences - add one more field to preference model specifying category
of question
reorganize the preferences - questions are bit repetitive

Testing out requests:
two people can request each other - change button to show confirm roommate instead of
request

Potential addition:
confirmation email with confirmation link (tentative)

Goals:
Add group, change requests, UI, smarter matching, changing preferences
        Current matching algorithm: weighted hamming distance
        Update design challenges regarding groups, threat model, context diagram
