11/13 Meeting Notes

triples and quads will be implemented after MVP, implement groups
suggestion: have a marker for desired number of roommates
but for now just doubles!

Each user has preferences field - initialized to don't care
  -   is this okay? yes

Suggestion: use sessions and cookies to know current user
  -   can store cookie that keeps track of what user is logged in

Update design doc according to the deadlines page, don't need to update as you go.

Marker for how many roommates you want?
  -   Right now have marker for available or unavailable: if available then still looking for
      roommates.

UI should be intuitive and usable - no need for polished UI design

Should we build logic for allowing only doubles?

Should we remove ourselves or should roommates be allowed to kick others out?
  -   suggestion: remove yourself

Don't need API in design doc

Testing - testing methodology or qunit?
  -   need qunit
